Eliminates carrying & storing bulky hoses

Hide-A-Hose solves the problem of carrying and storing a bulky central vacuum hose. Simply pull the amount of hose you need from the wall inlet and begin vacuuming. When you're finished, the suction from the central vacuum power unit retracts the hose.

Reduced dust means cleaner air

A valuable addition to a healthier home is a built-in central vacuum system. The power unit is up to five times more powerful than a conventional vacuum. So it captures more dust, dirt, and allergens, completely removing them from the living area.

Traditional vacuums can spread particles and allergens around your home and recirculate them into the air you breathe. A recent clinical study found that using a central vacuum can improve allergy symptoms as much as 60%. Many green building programs recommend or even require central vacuums.

"Before I saw the Hide-A-Hose system I wasn't sure I was going to get a central vacuum for my home. I was tired of lugging the bulky hose from inlet to inlet, up and down the stairs and especially shoving it in the closet when I was done. The Hide-A-Hose system may be the coolest thing in my new house, and because it is more convenient, we clean more often, so our home is cleaner and healthier. My friends are very envious."
